

DeepSeek data and deployment checklist

Choose the exact setup before any business data moves.

CHOOSE 1 EXACT SETUP

- ☐ Hosted chat ☐ API or direct software connection ☐ Privately hosted model

EXACT SERVICE, ENDPOINT, HOST OR MODEL RELEASE

SHIFT & LEAD EXAMPLE

Use public or invented inputs. Run the same known task in the current tool and this setup. Record accuracy, correction work, speed, cost and the people or systems needed to keep it running.

1 Data path

List every input, output, log and backup. Add where each is processed and how long it is kept.

2 Terms and licence

Link the current terms, privacy policy, model licence and any licence inherited from a base model.

3 Security and location

Name the contract, privacy, security and location rules this exact setup must meet.

4 Hosting and updates

Name the host, infrastructure, dependencies, update plan and monitoring needed to run it.

5 Owners and support

Name who owns access, updates, support, incident response and model replacement.

6 Work test

Record quality, correction work, speed, cost and maintenance against the current tool.

7 / DECISION FOR THIS EXACT SETUP

Decide only when the deployment, licence, data path, owner and test result are documented.

- ☐ Approve ☐ Restrict ☐ Reject
